As a designated 501(c)(3) nonprofit hospital, Piedmont Rockdale Hospital is required by the Internal Revenue System to provide to conduct a triennial community health needs assessment (CHNA), in accordance with regulations put forth by the IRS pursuant to the 2010 Patient Protection and Affordable Care Act (ACA). In its simplest definition, a CHNA is a measurement of the relative health or well-being of a given community. It’s both the activity and the end-product of identifying and prioritizing unmet community health needs, which is accomplished by gathering and analyzing data, soliciting the feedback of the community and key stakeholders and evaluating our previous work and future opportunities. Through this assessment, we hope to better understand local health challenges, identify health trends in our community, determine gaps in the current health delivery system and craft a plan to address those gaps and the identified health needs.

Key findings

- Obesity is a critical issue in the community as more than a third of all county residents are obese.
- Part of the issue is access to healthy foods - nearly half the population has some issue accessing healthy foods such as fruits and vegetables.
- This also shows itself in the key health problems the community faces, such as high rates of heart disease and diabetes.
- Rockdale is a growing community, and particularly so for minorities.
- Significant disparities between races still remain, particularly when it comes to poverty and related measures.
- County residents also have high rates of cancer, though these are on par with state averages.
- Opioid deaths and prescription rates still remain high.

2020, 2021 and 2022 health priorities

A key component of the CHNA is to identify the top health priorities we’ll address over fiscal years 2020, 2021 and 2022. These priorities will guide our community benefit work. They are, in no order:

- Increase access to appropriate and affordable health and mental care for all community members, and especially those who are uninsured and those with low incomes
- Decrease deaths from cancer and increase access to cancer programming for those with living the disease, with a focus on lung and breast cancer
- Promote healthy weights and behaviors as to decrease preventable instances of heart disease and diabetes
- Reduce opioid and related substance abuse and overdose deaths

With each priority, we will work to achieve greater health equity by reducing the impact of poverty and other socioeconomic indicators. You can find more detail on how priorities were chosen, our overall process and our data sources beginning on page 14. You can find our implementation strategy beginning on page 16.
Piedmont Rockdale serves patients from all of Georgia, however, for purposes of this CHNA, we consider our community to be Rockdale County.

- In 2017, approximately 88,482 people lived in Rockdale County's 130 square miles. The majority of the community is African-American -- about 57 percent. Whites and Hispanic or Latino groups compromise a total 41 percent and Asian populations represent about 2 percent of the county. The county slightly skewed female.
- Rockdale County is growing, with a 22 percent increase in population between 2000 and 2010. Hispanic and Latino populations alone grew by 93 percent during that time.
- In 2017, the median household income was $54,175, which falls in line with the state and national averages of $52,977 and $57,652, respectively.
- In 2017, 16 percent of the county lived at or below the poverty level -- about 14,232 people.
- A majority of people rent their homes in Rockdale County-about 69 percent in 2017, a rate much higher than state and national averages.
- 4.2 percent of adults were unemployed in 2018, a figure slightly worse than state and national averages.
- There were 6,089 veterans living in Rockdale County in 2017. The majority served in the Gulf War, and approximately 14 percent lived in poverty.
- The median age is 37, on par with state and national averages.

Community snapshot

One of the newest hospitals to join the Piedmont Healthcare family, Piedmont Rockdale Hospital is a 138-bed hospital in Conyers serving Rockdale County and the surrounding area. Offering 24-hour emergency services plus major medical, surgical and diagnostic care, Piedmont Rockdale is known for delivering high-quality, patient-centered care and the hospital’s more that 1,000 employees are committed to making a positive difference in every life they touch.

Key hospital stats

- **1,000+ employees**
- **85+ volunteers**
- **450+ physicians**
- **100+ Allied Health Professionals**
- **1,752 newborn deliveries**
- **55,087 emergency department visits**
- **4,586 surgeries**
- **50,126 outpatient encounters**
- **8,761 inpatient admissions**
In 2018 and in comparison with the other 159 Georgia counties, the University of Wisconsin's County Health Rankings placed Rockdale County:

- **53rd for health outcomes**, with overall health being generally better than or on par with most other counties in the state.
- **44th in length of life**, as Rockdale County residents tend to live slightly shorter lives than that of the average Georgian.
- **63rd for quality of life**, with certain self-reported indicators on par with state averages.
- **76th for healthy behaviors**, with most indicators -- except for drinking -- as higher than their counterparts in most other Georgia counties.
- **58th for clinical care**, with key clinical factors such as provider to patient ratios slightly better than state averages.
- **52th for social and economic factors**, a ranking large in part due to the county's high rates of children in poverty, children in single parent homes and income inequality.
- **110th for physical environment**, with long, solo commutes and inefficient public transportation for county residents.

Rockdale County ranks fairly low in two key areas - healthy behaviors and physical environment - and relatively average in other indicators, such as social and economic factors and health outcomes.

### Mortality

In Rockdale County, like with the rest of Georgia, heart disease is the number one cause of age-adjusted death. Age-adjusted death rates allow communities with different age structures to be compared. In comparison, premature death is when death happens before the average age for a given community.

<table>

<tr>
<td>10</td>
<td>Nephritis, nephrotic syndrome and nephrosis</td>
</tr>
</tbody>
</table>

Between 2013 and 2017, the top cause of premature death was certain conditions originating in the perinatal period. Other leading causes of premature death are, in order, heart disease, motor vehicle crashes, suicide, accidental poisoning, homicide, diabetes, diseases of the nervous system, lung cancer and congenital malformations, deformations and chromosomal abnormalities. As evidenced in this list, the impact of issues related to unhealthy behaviors and mental health was significant, indicating a clear need for more aggressive interventions.
In Rockdale County, 16 percent of the total population was uninsured in 2017, and 22 percent of the adult population was uninsured in 2017. Rates for children and elderly populations were much lower at 9 percent for children and 1 percent for those 65+.

Statewide, one in five uninsured adults in 2017 went without needed medical care due to cost. Studies repeatedly demonstrate that the uninsured are less likely than those with insurance to receive preventive care and services for major health conditions and chronic diseases. Additionally, these patients are less likely to be able to afford necessary medicine and ongoing chronic condition management. Finally, lower-income patients are more likely to have increased health issues due to social determinants of health.

Health factors

Access to care
- There were no designated health professional shortage areas in the community in 2016. This does not mean, though, that all community members have access to care.
- Throughout Georgia, more than a fifth of all women and a third of all men report having no personal doctor or health home.
  - This was particularly true for minorities, whose rates of not having a doctor are much higher than that of their white counterparts.
- There were 74 dentists and 126.2 mental health providers per every 100,000 people in Rockdale County in 2015. These are ratios at or below state and national averages, meaning more providers are needed to adequately address mental and dental health.

Health status
- Community members have reported an average 3.9 poor or fair physical and 3.8 poor mental health days monthly, stats in line with state averages. A total 19 percent of Rockdale County residents reported their health as poor or fair. Both health indicators have worsened since our last CHNA.
- Statewide, race matters when it comes to poor health status. Approximately 26 percent of Hispanics reported being in poor health in 2017, as compared to their white and African-American counterparts (18 percent and 19 percent, respectively). Information on other races was not available.

Quality and length of life
- Preventable hospital stays among Medicare enrollees averaged 62 preventable hospital events per every 1,000 enrollees in 2015. This figure is worse than state and national averages.
- Medicare enrollees tend to receive proper diabetes screenings, though still lag in mammograms.
- 10 percent of the population lived with at least one disability in 2017, which was lower than the state average of 12 percent. The highest concentration of disabled populations in the northwestern part of the county.
- The infant mortality rate in Rockdale County is less than state and national averages, at 6.5 infant deaths per every 1,000 births in 2017.
  - That year, 10 percent of all babies born were at a low birth weight, and with African American infants most likely to be born at a low birth weight.
The number one cause of age-adjusted deaths and premature deaths for both men and women each year between 2013 and 2017 in Rockdale County was ischemic heart and vascular disease. In 2017 alone, 197 people died from a major cardiovascular disease.

To the left is a breakdown of premature deaths related to ischemic heart and vascular disease by census tract within the county between 2013 and 2017. The darker the color, the more prevalent the issue. This allows us to see exactly where we have the most instances so we can more directly target interventions to this community in the future.

The prevalence of heart disease in the United States is expected to rise 10 percent between 2010 and 2030. This change in the trajectory of cardiovascular burden is the result not only of an aging population but also of a dramatic rise over the past 25 years in obesity and the hypertension, diabetes and physical inactivity that accompany weight gain. Extensive research from the American Heart Association has also demonstrated a strong correlation between social determinants of health (SDHs) and heart disease. Issues related to SDHs include higher rates of smoking, obesity, lack of physical activity and poor diets, all key contributors to heart disease.

Heart disease

In 2017, 29 Rockdale County community members died from stroke each year, making it the fifth leading cause of age-adjusted death. Stroke can be caused from several reasons, including a blocked artery, high blood pressure, diabetes, high cholesterol, certain heart conditions, obesity and unhealthy lifestyle choices. While stroke impacts all patients, like with most health measures, the lower income and less educated a person is, the more likely he or she is to experience more severe repercussions, such as death, for several reasons, including limited health literacy, difficulty affording care and necessary prescriptions and unhealthy behaviors.

Stroke

Approximately 21 percent of adults lived with diabetes in Rockdale County in 2015, a figure higher than state and national averages (11 percent and 9 percent, respectively). In 2015, a staggering 29 percent of Medicare beneficiaries lived with diabetes. The numbers may be higher for Medicare beneficiaries because that population is more likely to be routinely tested.

Diabetes

In Georgia, the less educated you are, the more likely you are to have diabetes. In 2017, Georgians who did not graduate high school were more than twice as likely to be diagnosed with the disease than Georgians with a college diploma. The same holds true for lower incomes versus higher incomes. According to the Centers for Disease Control and Prevention, in 2017, the highest percentage of Georgians with diabetes had not graduated high school and earned less than $25,000.
Cancer continues to have a devastating impact in Rockdale County. In 2017 alone, 135 people died from cancer. Of those, lung cancer kills the most Rockdale County community members - 40 in 2017. Overall, between 2013 and 2017, it was the 4th leading cause of age-adjusted death.

To the right is a map of age-adjusted cancer deaths by census tract those years. The darker the color, the more deaths that occurred in that area of the county. Knowing where these deaths occur helps us focus our efforts on screening and care for patients at high-risk for cancer.

Knowing that cancer is so closely tied to unhealthy behaviors, including tobacco use, programs that support smoking cessation and healthy eating targeted to specific areas of the county could have a big impact.

Breast cancer was the 11th leading cause of age-adjusted death and colon, rectum and anal cancers were the 12th leading cause of death. Even though fewer women now die from the disease, female breast cancer incidence rate is higher than state and national averages, with a rate of 134 incidences per every 100,000 people.

There are an average 68 new lung cancer cases diagnosed annually, and about 5,178 women lived with the disease in 2015. The lung cancer incidence rate is lower at 56 incidences per every 100,000 people. In 2015, an estimated 8,571 people had lung cancer. Each year, there are an average 48 new cases diagnosed.

Both in Georgia and in the nation, the gap in the cancer rates widens between racial and socioeconomic groups, particularly in preventable cancers, according to the American Cancer Society.

For example:

• Deaths from some cancers, mostly related to obesity and tobacco use, continue to rise among low-income populations.
• Poor women have twice as many deaths from cervical cancer than affluent women.
• Lung and liver cancer mortality is more than 40 percent higher in poor men compared to affluent men.
• White females in Georgia are 8 percent more likely than black females to be diagnosed with cancer.
• Black males in Georgia are 8 percent more likely than white males to be diagnosed with cancer, and black males are 25 percent more likely than white males to die from cancer.
• Cancer survivors carry greater financial burdens related to medical debt payments and bills versus patients without a cancer history, and younger survivors face the greatest hardships.

Unhealthy behaviors, such as tobacco use, poor diet, physical inactivity and obesity heavily contribute to cancer rates and tend to disproportionately impact low-income populations. For example, although overall smoking rates have decline statewide, high rates still persist among lower educated, lower income populations. Also, low income populations tend to have less access to healthy foods.

Additionally, this population is far less likely than the rest of the community to have a primary care physician, receive annual testing and preventative care, including cancer screenings. They are statistically more likely to be diagnosed due to hospitalization or an emergency department visit once the disease has progressed, meaning their condition is generally far more advanced and will require significant intervention.
Healthy behaviors

While poor health and chronic conditions are caused by a number of factors, a key contributor is healthy behaviors. All years below are for the latest time frame for which data was available.

- **Adult obesity rates were high in Rockdale County, as more than a third of county residents are obese.** This contributes to a number of diseases, including heart disease, stroke and diabetes.

- **Smoking rates were lower than the state average, though smoking is still an issue as it is a key contributor to cancer, and in particular lung cancer, which has a devastating effect on Rockdale County residents.**

- **13 percent of county residents commute more than 60 minutes to work each day.** The majority of commuters from Rockdale County drive alone, which contributes to depression.

- **The violent crime rate was 334 per every 100,000 county residents**, a figure lower than state and national averages.

Mental health

- **Mental health and behavioral disorders was the 2nd leading cause of age-adjusted death for all county residents between 2013 and 2017.**

- **Suicide was the fourth leading cause of premature deaths for all races between 2013 and 2017.** It was most common among white males aged 25 to 34 years of age. The rate of suicides has steadily ticked up over the last ten years, as it has in Georgia and the rest of the country.

- **There was one mental health providers for every 921 residents in the county in 2017**, a rate far worse than the state and national averages of one provider for every 813 and 493 residents, respectively.

- In 2015, 15 percent of the Medicare population was diagnosed with depression, slightly better than state and national averages.

Opioid use and substance abuse

- **Like in the rest of the state, opioid prescriptions are an issue in the Rockdale County community, with a total 73.5 opioids prescriptions written per every 100 people in 2017.** Please note we aren't able to tell how many scripts were written to a single person. We only know the overall figure, meaning a single person could have several prescriptions.

- Statewide, the age-adjusted opioid death rate was 9.7 per every 100,000 people, a 10 percent change in rate from 2016. This shows the issue is only continuing to worsen.

- There were 12 deaths from all overdoses in Rockdale County in 2017, and half were directly related to opioids.
As defined by the World Health Organization, social determinants of health (SDHs) are the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems shaping the conditions of daily life. Included among these is economic stability, housing stability, food security, adequate income to pay for core services such as utilities, literacy, access to healthy food, access to safe recreational spaces, access to health care and access to services in languages the person understands. SDHs often carry negative health impacts, including increased risk of mortality, poor health and increased cardiovascular disease risks.

- In 2016, 41% of the population had what's considered to be low healthy food access. An additional 10% have no access to healthy foods. These patients live in what's called a food desert, meaning there is no food outlet with healthy food options, such as produce, within a reasonable travel time.
  - Of the 15 census tracts in Rockdale County, 11 were in a food desert.
- There were 78 fast food restaurants in Rockdale County in 2016, a figure that's far more, per capita, than state and national averages. There are 17 grocery stores, though they tend to be concentrated in the eastern part of the county.
- 33% of households had housing costs that exceeded more than 30% of total household income in 2017, indicating a cost burdened household more likely to face overall financial difficulty. This is directly linked to having trouble paying medical bills.
- 1,355 Rockdale County households had no motor vehicle in 2017, which can present significant barriers to accessing care and other primary needs, such as groceries, due to very limited public transportation options in the county.

Families and children

- 46% of children lived in single-parent homes in 2017, a statistic that can indicate financial insecurity at home.
- 71% of children qualified for free or reduced cost lunch in the 2015-2016 school year, a statistic that represents poverty and food instability. Rockdale County is much more than the 2017 state average of 62 percent.
- For every 1,000 teen girls aged 15 to 18 in Rockdale County, 39 gave birth to a child on average each year between 2010 and 2016. African Americans and Hispanic or Latina teen birth rates were 34 and 109 births per every 1,000 teen women, respectively. Children born to teen are statistically much more likely to experience adverse health and socioeconomic issues as they grow older.
In December 2018 and December 2019, 16 key stakeholders within the Piedmont Rockdale community provided their thoughts on community health, community assets and the role of the hospital in addressing unmet community health needs via a web survey. Below are the results of that survey.

**How would you best define Piedmont Rockdale's community?**

- Rockdale County: 50%
- Wherever Piedmont Rockdale’s patients come from: 25%
- Rockdale, Newton and Walton counties: 13%
- The whole Piedmont system and all it serves: 12%

**What do you think are the most pressing health problems in Piedmont Rockdale's community?**

Top ten answers for very important, out of 25 listed problems:

1. Ability to pay for care
2. Cost of health care
3. Lack of health insurance
4. Mental health
5. Drug abuse - illegal substances
6. Lack of transportation to health care services
7. Obesity in adults
8. Prescription medication too expensive
9. Diabetes
10. Obesity in children and teenagers

**What issues do you think may prevent community members from accessing care?**

Top ten answers:

1. No insurance and unable to pay for the care
2. Unable to pay co-pays and deductibles
3. Transportation
4. Don’t understand need to see a doctor
5. Cultural/religious beliefs
6. Language barriers
7. Unable to use technology to help schedule appointments, find the doctor, etc.
8. Fear (e.g., not ready to face health problems)
9. Don't know how to find doctors
10. Lack of availability of doctors
How important are the following actions in improving the health of Piedmont Rockdale’s communities?

Top 10 answers ranked most important:

1. Access to health care services
2. Access to low-cost mental health service
3. Additional access points to affordable care within the community
4. Access to affordable inpatient behavioral care
5. Affordable healthy food
6. Expanded access to specialty physicians
7. Financial assistance for those who qualify
8. Local outpatient mental health services
9. Safe places to walk/play
10. Transportation for care

What is your vision for a healthy community?

Some answers:
"My vision for a healthy community would be all members having access to equitable healthcare services and transportation to get there."
"Access to affordable health care, healthy eating outlets and safe places for physical activity."
"Access to care and wrap around services."
"Healthcare that people can actually afford."
"Assistance with long term care for people with chronic conditions. They may receive help when in a crisis, but once the crisis is over, they have no follow-up and continued care due to lack of income."
"Access (transportation) to healthcare."

What is the single most pressing issue you feel our patients face?

Some answers:
"Lack of housing, which creates many health issues."
"Health care costs."
"Obesity."
"Not aware of assistance or services that may be available."
"Lack of intensive mental health services."
"Low incomes."
"Transportation is one of the largest barriers for community members."
"Affordability of health care."
"Mental health services that are affordable and available to everyone in the community, with ongoing support."
Seventy-four Piedmont Rockdale Hospital employees completed an internal CHNA assessment. Questions focused on issues facing community members, as well as how Piedmont staff feels the hospital should address those issues. Below are the results from all who answered the surveyed throughout the system, which had a total 897 responses.

**How would you best define Piedmont’s community?**

- Wherever our Piedmont patients come from: 18%
- My Piedmont hospital’s county: 5%
- My Piedmont hospital’s city: 5%
- My Piedmont hospital’s employees, regardless of where they live: 8%
- The Piedmont system and all the counties served: 60%
- Other: 4%

**What do you think are the most pressing health problems in Piedmont’s community?**

Top ten answers:

1. Ability to pay for care
2. Lack of health insurance
3. Cost of health care
4. Mental health
5. Prescription medicine too expensive
6. Lack of transportation to health care services
7. Drug abuse - prescription medications
8. Cancer
9. Obesity in adults
10. Lack of supportive services for patients

**What issues do you think may prevent community members from accessing care?**

Top ten answers:

1. No insurance and unable to pay for the care
2. Unable to pay co-pays/deductibles
3. Transportation
4. Fear (e.g., not ready to face/discuss health problem)
5. Don't understand the need to see a doctor
6. Unable to use technology to help schedule appointments, find the doctor, etc.
7. Don't know how to find doctors
8. Language barriers
9. Lack of availability of doctors
10. Cultural/religious beliefs
How important are the following actions in improving the health of Piedmont’s communities?

Top 20 answers ranked most important:

1. Access to low-cost mental health services
2. Access to local inpatient behavioral health
3. Free or affordable health screenings
4. Local outpatient mental health services
5. Additional access points to affordable care within the community
6. Financial assistance for those who qualify
7. Expanded access to specialty physicians
8. Affordable healthy food
9. Services to help physically or developmentally disabled children and adults
10. Safe places to walk/play

11. Community-based health education
12. Community-based programs for health
13. Cancer awareness and prevention
14. Increased social services
15. Opioid awareness and prevention campaigns
16. Transportation for care
17. Substance abuse rehabilitation services
18. Programs to address SDHs
19. Access to dental care services
20. Partnerships with local charitable clinics

What do you think is missing in how Piedmont works with the community?

Answers centered on the following themes:

- More Piedmont-sponsored low-cost clinics
- More visible community involvement, especially with minorities
- More outreach and free services for preventative care
- Increased access to specialty physicians
- More attention to mental health
- More attention to opioid and substance abuse
- Screenings that are free for community members, especially for cancers
- A better system for referring patients to the services they need that are outside the hospital

What do you think is most helpful well in how Piedmont works with the community?

Answers centered on the following themes:

- Health education
- Financial assistance program
- Support for local charitable services and community partnerships
- The Cancer Wellness Program
- Continued growth with beds and services
- The Walk with a Doc program
- Sixty Plus Program
- Giving Epic to local clinics
- Care coordination services
- Breast feeding training for new moms
- The community benefit grants program
As a part of our process, we interviewed 31 state and regional stakeholders and policy makers that represent public health, low-income populations, uninsured and uninsured persons, minorities, chronic conditions and older adults, as well elected officials and lawmakers. These interviews were conducted for people representing the entire region, including Rockdale County. Answers carried certain themes. Below is a summary of comments.

**Affordability and access**

- Health insurance coverage was identified among almost every interviewee as a key pressing health need, and 84 percent of interviewees felt the hospitals could play a larger role in promoting public policies that could expand coverage (such as Medicaid eligibility expansion) or in promoting local activities to encourage enrollment in existing programs. As one interviewee stated: "Hospitals tend to wait until the patient shows up sick to consider how that patient can afford their care or if he or she can get coverage. If they supported more outreach for getting coverage, the patient would probably have been able to get care before they were so sick they needed hospital care."

- Some interviewees suggested programs such as expanded scope of service for nurse practitioners and physician assistants could broaden access to affordable care, as well as the expanded use of telehealth. Each interviewee cited the role that Federally Qualified Health Centers (FQHCs) and low-cost clinics currently play in addressing the needs of uninsured patients, and all encouraged further investment in these organizations through the provision of free labs and imagery and shared EMRs.

- Several interviewees noted the need for increased access to follow up and specialty care for all patients. One patient advocate interviewee stated she fielded questions daily from publicly insured patients who didn’t understand how their network worked and uninsured patients who were directed to follow up with a specialist but didn’t know who would take them.

- Affordability is a barrier, as many private physicians do not provide financial assistance. As one interviewee stated: "The patient then just decides they can’t get to that specialist and, most likely, their condition gets worse and they are back in the emergency department, sicker and needing even more care now."

- Almost every interviewee noted transportation issues as a key barrier to access, particularly for older adults and those who are disabled.

**Local investment and care coordination**

- Most interviewees stated a need for stronger hospital intervention and investment in local communities. While most acknowledged the positive role Piedmont hospitals currently play in the community, some were critical of how Piedmont handles patients and programs that don’t pay well.

- Several interviewees noted the need for Piedmont hospitals, including Piedmont Rockdale, to better coordinate with surrounding rural communities, including the expansion of primary and specialty care physicians into underserved areas, perhaps through the use of telehealth.

**Mental and behavioral health**

- Lack of access to behavioral health services also has a huge impact on community health. Key informants recommended training a cross-section of professionals to recognize the role of behavioral health in diagnoses and make appropriate referrals.

- Interviewees also stated a need for hospital investment in substance abuse, addiction and prevention services, including its own approach to issues like opioid prescriptions, due to the health impacts addiction have on patients.
Social determinants and root causes of poor health

- All interviewees discussed the role of social determinants of health (SDHs) as a critical issue Piedmont is well-positioned to address. As one interviewee stated: "Piedmont is... in a great position to create programs and referral systems to help address the underlying issues that many patients face. Piedmont could lead all hospitals in this space."
- Some interviews noted that SDHs are issues that impact everyone, and are a key cost driver due to the role SDHs play in preventing people from staying well.
- Most interviewees felt that the issues facing our community members were not just solely the responsibility of the hospital, but all acknowledged the outsized role hospitals can play in triggering and sustaining long-term positive change, particularly when working in partnerships with others in the community.

CHNA approval

This community health needs assessment was unanimously approved by the Piedmont Rockdale Hospital Board of Directors on April 18, 2019. The CHNA implementation strategy was unanimously approved October 17, 2019.

Methodology

The Piedmont Rockdale Hospital CHNA was led by the Piedmont Healthcare community benefits team, with input and direction from Piedmont Rockdale Hospital leadership and direct input from board members both at a March 2018 board meeting and through individual meetings with hospital leadership, including the hospital's chief executive officer and chief operating officer.

Process

The CHNA started first with a definition of our community. We looked at our entire Piedmont Healthcare service region, which spans the majority of the state. We paid particular attention to the home counties of our hospitals, which is reflected in the individual hospital CHNAs, including this one, due to the impact of our tax-exempt status.

Generally, nonprofit hospitals do not pay four types of taxes: property, state and local income, sales and use, and bond financing. Of these, property taxes make up the largest segment of a hospital’s tax exemption — about one-quarter. Because of this, we want to ensure that we are providing equal benefit to our local community. Additionally, we take into consideration patient origin, and especially that of our lower-income patients, such as those who qualify for financial assistance or receive insurance coverage through Medicaid.

Once we established our primary community, we then conducted an analysis of available public health data. This included resources from: US Census, US Health and Human Services’ Community Health Status Indicators, US Department of Agriculture, Economic Research Service, National Center for Education Statistics, Kaiser Family Foundation’s State Health Facts, American Heart Association, County Health Rankings and Georgia Online Analytical Statistical Information System (OASIS). All figures are for 2017, unless otherwise noted. Health indicators are estimates provided by County Health Rankings and hospital data was provided by the hospital.
An internal survey was also conducted throughout the healthcare system for both clinical and non-clinical employees. Information was gathered on knowledge and understanding of community benefit and current programs, as well as suggestions for how we can better serve our patients and communities. Nearly 900 employees spanning the system responded. Additionally, we conducted a community-based survey in which local stakeholders were asked their thoughts on unmet community health needs and the hospital's role in addressing those needs. These stakeholders included local leaders, nonprofit representatives, elected officials and those with a unique knowledge of the challenges vulnerable populations face.

Finally, we conducted direct interviews with 31 state and regional stakeholders and policymakers, with each representing a specific group that tends to be adversely impacted by issues of health equity. These groups included but are not limited to: Georgians for a Healthy Future, Georgia Watch, ConsiderHealth, the Community Foundation for Greater Atlanta, the Georgia Charitable Care Network, the Medical Association of Georgia and Healthy Mothers, Healthy Babies.

**How we determined our priorities**

Several key community health needs emerged during the assessment process. The chosen priorities were recommended by the community benefit department with sign-off from hospital and board leadership. The following criteria were used to establish the priorities:

- The number of persons affected;
- The seriousness of the issue;
- Whether the health need particularly affected persons living in poverty or reflected health disparities; and,
- Availability of community and/or hospital resources to address the need.

The priorities we chose reflected a collective agreement on what hospital leadership, staff and the community felt was most important and within our ability to positively impact the issue. While the priorities reflect clinical access and certain conditions, all priorities will be viewed through the lens of health disparities, with particular attention paid to improving outcomes for those most vulnerable due to income and race.

**About community benefit**

Community benefits are programs or activities that provide treatment and/or promote health and healing as a response to identified community needs. These programs increase access to health care and improve community health, with a focus on vulnerable populations, such as those that are low-income, uninsured, underinsured, those with chronic conditions, the disabled, the elderly and any others who face additional barriers and health inequity. By federal mandate, community benefit programs must:

- Generate a low or negative margin;
- Respond to the needs of vulnerable populations;
- Supply services or programs that would likely be discontinued if the decision to offer this program was made on a purely financial basis;
- Respond to an identified public health need; and/or,
- Involve education or research that improves overall community health.

The CHNA guides Piedmont's community benefit work.
Piedmont Rockdale Hospital
CHNA Implementation Strategy – Fiscal Years 2020, 2021 and 2022

On October 17, 2019, Piedmont Rockdale's board of directors approved the hospital's community health needs assessment, which measured the relative health and well-being of our community. Through this process, we identified key health priorities we’ll address over the next three fiscal years. This below strategy was developed to address those identified priorities.

| Priority: Increase access points for appropriate and affordable health and mental care for all community members, and especially those who are uninsured and those with low incomes |
|---|---|---|---|
| **Vision** | **Goal** | **Tactics** | **How to measure** |
| Low- and no-income patients receive assistance for necessary care | Eligible low- and no-income patients are enrolled in Medicaid or hospital-based financial assistance program | • Financial assistance is available for eligible low- and no-income populations  
• Patients are adequately alerted that financial assistance is available  
• Patients are given tools, resources and ample opportunity to apply for assistance  
• Eligibility threshold of 300% Federal Poverty Level for financial assistance is maintained throughout all Piedmont hospitals  
• Actively screen all potential patients for Medicaid coverage | • Annual review of policy, guidelines, PLS and languages served, updated to reflect any changes  
• Consistent policy administered throughout PHC |
| Low- and no-income patients have access to community-based care | Ensure that patients at not-for-profit charitable clinic Mercy Heart have access to the care | • Provide certain lab services free of charge to Mercy Heart | • Clinic to provide a quarterly report on how many patients received labs, how many labs were processed, the top twenty labs utilized, trends in patient care, and the number of |
| Local efforts to increase access to care are strengthened and grown | Provide funding to support specific programs of not-for-profit organizations who provide direct physical and/or mental health services to low-income patients | • Provide funding to community-based non-profit organizations that work to increase access to care for vulnerable patients through direct service  
• Areas can include primary and specialty care, transportation to and from physical and mental health appointments and the provision of mental health care | • Goals of funded programs are to be determined by the individual organizations and approved by PHC and PRH  
• Progress evaluated by PHC and PRH every six months |

<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Future health workers are trained</td>
<td>Provide health professions education to students as to further build the health workforce</td>
<td>Continue to provide health education opportunities within the hospital, growing the program when possible and appropriate</td>
<td>Regularly monitor program by compiling monthly data on students and residents that is then used to evaluate program effectiveness, opportunities for growth</td>
</tr>
<tr>
<td>Patients and their families have meaningful input in their care</td>
<td>Create a patient and family advisory council to provide meaningful input on key areas of care</td>
<td>• Create a council of approximately 10 to 15 advisors comprised of patients, their families and other caregivers, as well as staff, who</td>
<td>• Yes/no on creation</td>
</tr>
</tbody>
</table>
apply firsthand knowledge to improving the experiences of other patients and caregivers
- Convene first meeting setting specific scope and goal of council, which could include internal initiatives to improve patient care and quality

- Other evaluation tactics to be determined by specific goals of council

| Patients have an increased awareness of local resources | Provide resource guide of state and local health-related services and other relevant information to vulnerable community members | Update guide annually
- Publish online and in print
- Distribute widely throughout hospital and community | Annual distribution number of guides 10% year over year increase for FY20 to FY22 (approximately 3.5K distributed throughout Rockdale community in FY19) |

| **Priority: Reduce opioid and related substance abuse and overdose deaths** |
|---|---|---|---|
| **Vision** | **Goal** | **Tactics** | **How to measure** |
| Hospital-based prescriptions for opioids and related drugs are reduced | Patients are at low risk of misusing opioids | - Track opioid prescribing by hospital and physician
- Use Epic EMR to provide caregivers with tools to monitor opioid use
- Offer patients ways to safely dispose of unused medication | Regularly monitor and increase program and activities, comparing with a FY19 baseline of participation, opioid prescriptions and educational outreach |
<table>
<thead>
<tr>
<th>Patients are supported in recovery from their opioid addiction</th>
<th>All hospital patients with opioid use disorders are provided support in receiving effective treatment leading to recovery</th>
<th>• Provide ongoing education on opioid prescribing</th>
<th>Regularly monitor and increase percentage of PHC patients, identified with an opioid use disorder, who are referred to treatment or support are increased, measured by program participation and qualitative measures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opioid addiction is viewed as a disease</td>
<td>All hospital employees and medical staff members view opioid use disorders as a medical condition, free of negative stigma</td>
<td>• Develop relationships with community resources to which patients can be transitioned • Make these community resources known and available to our caregivers</td>
<td>Regularly monitor percentage of PHC employees who report that they view opioid use disorders as a medical condition, free of stigma are increased, measured by qualitative mechanisms</td>
</tr>
<tr>
<td>Hospital-based prescriptions for opioids and related drugs are reduced</td>
<td>PHC adopts and uses appropriate non-opioid pain management strategies</td>
<td>• Use Teachable Moments to engage employees on reducing stigma associated with opioid addiction • Regularly look for opportunities to engage staff in internal opioid-awareness activities and opportunities</td>
<td>Regularly monitor non-opioid pain management strategies throughout the hospital, charting increases in non-opioid pain protocols and therapies</td>
</tr>
</tbody>
</table>
| Community-based efforts to curb opioid addiction and overdose deaths are increased | PRH provides meaningful leadership in its community by partnering with others in combating opioid abuse | • Promote local prescription take-back day activities, in partnership with local law enforcement  
• Serve as leaders in community-based programs to address opioid abuse and addiction  
• Support community-based strategies to combat opioid abuse through partnerships and task forces | • Monitor attendance for take-back day with an aim to increase participation year over year  
• Measure general community awareness of opioid use by charting what resources and partnerships are active now, with a goal to increase those year over year |
| Local efforts to decrease opioid abuse and overdose deaths are increased | Provide funding to community-based non-profit organizations that work to increase access to care for vulnerable patients | • Issue of a notice of available funding to all communities soliciting grant applications to curb opioid addiction and overdose deaths  
• Award annual funding based on merit of application and group's ability to positively impact issue  
• Monitor grant progress | • Goals of funded programs are to be determined by the individual organizations and approved by PHC  
• Progress evaluated by PHC and PRH every six months |
| Community members are more familiar with identifying addiction and local resources to help support recovery | Create and widely distribute an opioid-centric Georgia-based resource guide | • Develop an eight- to ten-page guide to address issues of opioid use and prevention  
• Print and distribute guide throughout Piedmont communities and to patients | Aim for initial community-wide distribution of 1,000 copies, to be increased 15% year over year |
<table>
<thead>
<tr>
<th>Priority: Decrease deaths from all cancers, with a focus on lung cancer</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Vision</strong></td>
</tr>
</tbody>
</table>
| High-risk community members receive lung cancer screenings | Increase local awareness of and local opportunities for lung cancer screening | • Create and deploy local awareness campaign on risks, warning signs and early detection for lung cancer, particularly among high-risk groups  
• Increase CT scans for CMS-defined heavy smokers  
• Increase early identification of suspicious nodules and thereby increase early cancer detection  
• Understanding low-income populations are more likely to smoke, create a mechanism for referrals for CT scans CMS-defined heavy smokers from Mercy Heart charitable clinic | • Measure current awareness by availability of local resources and a survey of local messaging  
• Utilizing FY19 figures, aim to increase CT scans for heavy smokers, general community  
• Monitor positive results and continually improve referral process for follow-up care, particularly for low-income community members and others who may face particular issue accessing the health system |
| Low-income community members receive appropriate cancer screenings | Create and a provide a free Mammogram Voucher Program (MVP) to underserved and/or underinsured women | Free or reduced-cost mammograms are provided to women that do not have insurance to receive diagnostic care and prevention of breast cancer | • Regularly monitor and evaluate program to determine if enough eligible women are receiving necessary mammograms  
• Solicit foundation and grant support to increase funding, community support |
Cancer prevention education to the Hispanic/Latino community is increased

- Reduce cultural barriers to cancer prevention and education for Hispanic/Latino community
- Assess effectiveness of current services and identify opportunities to improve/enhance delivery methods
- Engage staff to identify cultural barriers
- Work with utilize best practices for engaging the Hispanic/Latino
- Identify community agencies/organizations that work with the Latino communities
- Coordinate with community stakeholders/partners on promotional health fairs and cultural events with a focus on education
- Establish baseline of current activities
- Monitor output of activities and measure participation, outreach and engagement, aiming for a significant increase year over year
- Monitor partnership and outreach effectiveness through qualitative methods, including interviews and surveys

<table>
<thead>
<tr>
<th>Vision</th>
<th>Goal</th>
<th>Tactics</th>
<th>How to measure</th>
</tr>
</thead>
</table>
| The community comes together to eliminate obesity and support healthy behaviors | Build and engage community-based partnerships to identify and eliminate potential barriers to healthy weights and behaviors | - Identify key health and community stakeholders who can represent the local community, including the Rockdale County Health Department, the Rockdale Coalition for Children and Families and the Conyers Housing Authority  
- Convene stakeholders to identify overlapping and/or related tactics to address issues related to obesity and unhealthy behaviors | - Through designated hospital leader, ensure partnerships are being actively built and cultivated  
- Specific measurement to be dependent on shared goal |
| Low-income community members know how to shop for and prepare healthy foods on limited budgets | Create a Cooking Matters program in partnership with Mercy Heart and/or other community-based groups who regularly work with low-income populations, as to combat obesity and promote healthy eating | • Create shared goal(s), develop strategies to achieve goal(s)  
• Using current blueprint, design and execute programming for healthy eating and shopping for families utilizing food stamps or have limited food budgets, and in consideration of conditions such as heart disease, diabetes and obesity  
• Recruit patients for a four-week, four-session hour-long program that includes a trip to a convenient and affordable grocery store to learn how to best shop and read labels to encourage healthy eating  
• Potentially partner with local food banks to ensure ongoing access to healthy foods  
• Monitor participation through attendance logs  
• Monitor effectiveness through qualitative surveys and participant interviews  
• Continually seek out ways to improve programming |
| --- | --- | --- |
| Public is alerted to risks and ways to reduce harm from obesity-related diseases, in including heart disease and diabetes | Create public service announcements aimed at reaching at-risk populations on obesity, healthy weights, diabetes and heart disease | • Utilizing evidenced-based messaging, create and deploy local public service announcements aimed at high-risk populations and the general public, in appropriate languages  
• Ensure all programming and relevant materials are bilingual and are accessible to populations with limited health literacy  
• Establish baseline of current messaging  
• Measure participation, outreach and engagement for current and new work, aiming for a significant increase year over year |
| The Hispanic/Latino community has more information on how to maintain healthy weights and behaviors education | Reduce cultural barriers to heart disease prevention and education for Hispanic/Latino community | • Assess effectiveness of current services and identify opportunities to improve/enhance delivery methods  
• Engage staff to identify cultural barriers  
• Work with utilize best practices for engaging the Hispanic/Latino  
• Identify community agencies/organizations that work with the Latino communities  
• Coordinate with community stakeholders/partners on promotional health fairs and cultural events with a focus on education | • Establish baseline of current activities  
• Monitor output of activities and measure participation, outreach and engagement, aiming for a significant increase year over year  
• Monitor partnership and outreach effectiveness through qualitative methods, including interviews and surveys |
| Low-income community members have access to healthier foods | Deploy a fresh prescription program for low-income patients in which we provide vouchers for healthy foods at a local Farmer’s Market or food bank | • Determine relevant partners and scope of programming, eligibility requirements (potential: partnership with Mercy Heart and local food bank; will help to ensure food bank has access to healthy foods)  
• Design program  
• Deploy initial programming and monitor for issues, areas to improve | • Utilizing an initial pilot model for a fixed duration of time, we will evaluate program for efficacy, challenges, opportunities  
• With partners, determine next best steps and ways to sustainably scale program |
Health issues we will not actively address as a top identified priority:

Other key health issues emerged during the FY17 to FY19 implementation strategy that we will not focus on during the next three-year community benefit cycle. These include:

- **Transportation**: Due to limited resources, we cannot address transportation issues in-house, however we will support community-based transportation efforts, when possible and appropriate, and make sure patients know what resources are available to them. We will also continue to solicit applications to our community benefit grants program from nonprofits that actively address issues of transportation within the Rockdale community.

- **Chronic Obstructive Pulmonary Disease**: We will not focus primarily on COPD in our upcoming community benefit work, we will continue our current clinical support and pulmonary rehabilitation program for those suffering from this condition and continue to look for ways to positively impact prevention efforts, including our efforts to curb smoking within the community.

- **Alzheimer’s disease**: Alzheimer’s disease continues to be a leading cause of death in the community. Although this is not a stated priority of the hospital during the FY20 to FY22 community benefit cycle, the hospital will actively support services aimed at patients and families suffering from the disease.
